Visual catalogue

of Kristals

Different knowledge structures deserve distinct shapes. Explore archetypes, situated examples, and one common visual grammar.

19 archetypes · 5 profiles · 10 visual patterns · 14 assemblies

The visual grammar

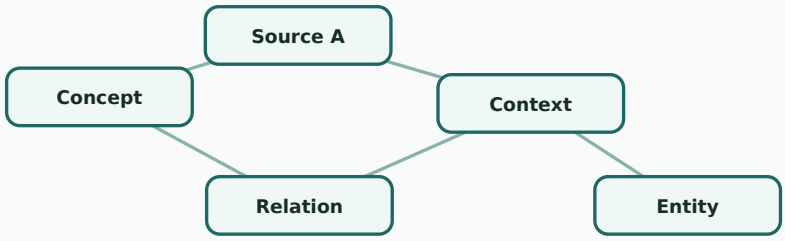

Linear	Ordered sequence of steps or transformations.
Branching sequence	Main process with decisions, exception branches and alternate outcomes.
Hub and satellites	A central case connects observations, proofs, state, and supporting documents.
Cluster / constellation	Interconnected clusters without one strict central hierarchy.
Tree / taxonomy	Branching classification from general groups to specific classes.
Timeline	Dated sequence of events, states, revisions or decisions.
Matrix / state table	Compare multiple items across multiple attributes or dimensions.
Casefile	A dossier connects records, notes, evaluations and next actions.
Multilayer	Several analytical layers or interpretations of a related subject.
Network / federation	Autonomous nodes linked by explicit references or coordination relationships.

Reading / integrity

The diagrams are fictional specimens, not evidence, Logical Contracts, or authorized decisions. Sources, access rights, and ownership boundaries belong to real Kristal instances.

ARK-01 Semantic Reference

Connected concepts, entities and sourced relationships. Reusable knowledge stores, dictionaries, educational and cultural references.

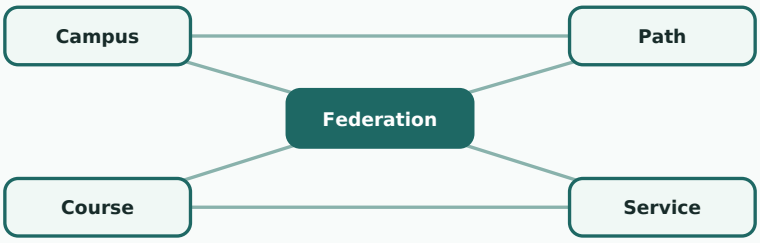

STRUCTURE Source-linked concepts, entities and typed relationships arranged in related thematic clusters.

USE CASES knowledge base · semantic dictionary · museum and education reference

Pattern: Semantic cluster

ARK-02 Federation / Topology

Hierarchy or network of separately identifiable knowledge states. Distributed campuses, organizational units and linked subsystems.

STRUCTURE Independent knowledge states linked by topology, scope, and separately owned parent-child references.

USE CASES multi-campus structure · federated sites · independent subsystems

Pattern: Federated network

ARK-03 Milestone and Proof Map

Sparse milestones, branches and pointers to proofs held elsewhere. Progress maps, mathematical roadmaps and cross-theory docking points.

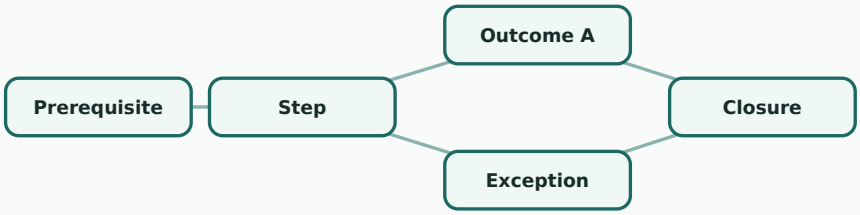

STRUCTURE Milestones and reached frontiers linked to proofs stored elsewhere; shortcuts do not replace proof.

USE CASES proof roadmap · research milestones · cross-theory references

Pattern: Sparse proof roadmap

ARK-04 Procedure / Protocol

Ordered and conditional steps, roles, prerequisites and exceptions. SOPs, institutional protocols and checklists.

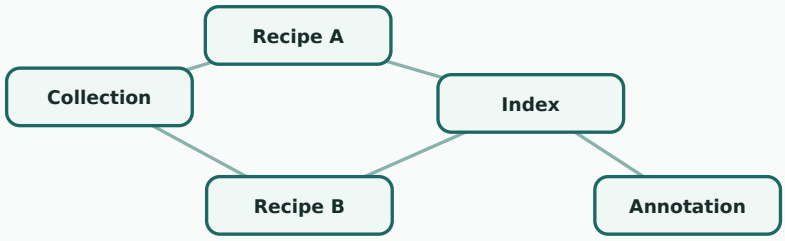

STRUCTURE Prerequisites lead to ordered actions, decisions, exception paths and authorized closure.

USE CASES standard operating procedure · field protocol · operations checklist

Pattern: Conditional protocol

ARK-05 Compilation / Collection

Curated, ordered and annotated independent works or knowledge items. Cookbooks, reference collections and anthologies.

STRUCTURE Independent entries collected, ordered and annotated without absorbing ownership of each entry.

USE CASES cookbook · anthology · curated reference

Pattern: Curated collection

ARK-06 Research Memory

Hypotheses, observations, trials and findings over time. Research notebooks, inquiry histories and lab studies.

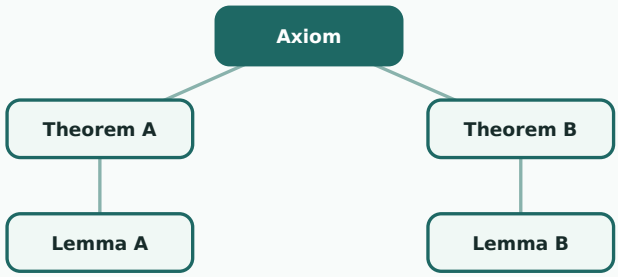

STRUCTURE Questions, hypotheses, trials and findings evolve over time with uncertainty preserved.

USE CASES research notebook · study record · experiment log

Pattern: Research history

ARK-07 Invariant / Formal Theory

Formal definitions, rules and logical dependencies. Theorem systems, invariant specifications and formal studies.

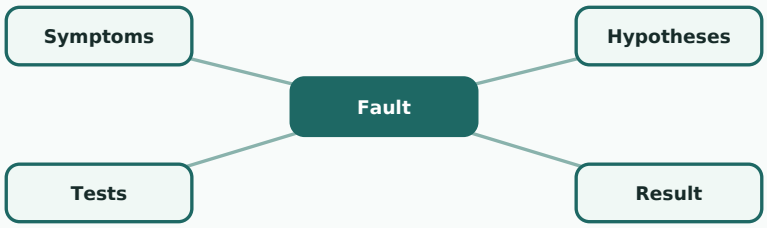

STRUCTURE Axioms and definitions support lemmas, theorems and explicit proof obligations.

USE CASES formal theory · invariant specification · proof dependency map

Pattern: Formal dependency tree

ARK-08 Causal Diagnosis

Symptoms, possible causes, test results and competing explanations. System troubleshooting, vehicle diagnosis and fault isolation.

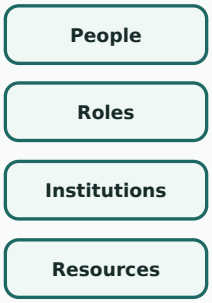

STRUCTURE A reported fault links observations, competing hypotheses, discriminating tests and results.

USE CASES system troubleshooting · vehicle diagnosis · root cause analysis

Pattern: Diagnostic hub

ARK-09 Multiplex / Organizational Model

Several relationship layers over shared entities. Organizational studies and social or institutional mappings.

STRUCTURE People, roles, institutions and resources are mapped in distinguishable relationship layers.

USE CASES organizational mapping · institutional studies · social relationships

Pattern: Organizational layers

ARK-10 Learning Path

Sequenced objectives, prerequisites and activities. Curricula and personalized learning journeys.

STRUCTURE Learning objectives, prerequisites, activities and assessments follow a navigable path.

USE CASES curriculum · guided training · learning plan

Pattern: Learning sequence

ARK-11 Event Ledger / Chronology

Dated observations, events and revisions. Incident logs, history, audit trails and case timelines.

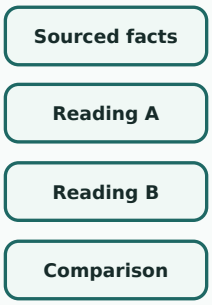

STRUCTURE Events, revisions, timestamps and provenance are recorded without assuming causality.

USE CASES incident timeline · audit trail · historical chronology

Pattern: Dated event sequence

ARK-12 Layered Interpretations

Separate derived readings of shared underlying material. Comparative analysis and alternative interpretations.

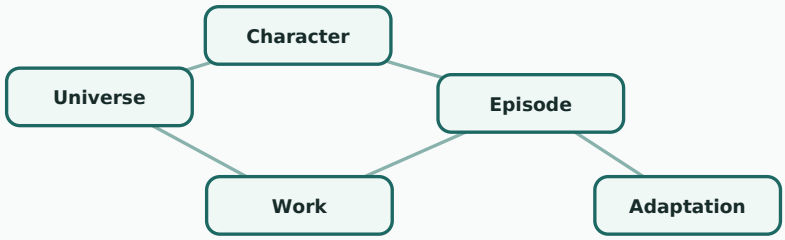

STRUCTURE Multiple readings and comparisons refer to the same source material without replacing it.

USE CASES comparative study · interpretation layers · analysis views

Pattern: Interpretation layers

ARK-13 Media and Creative Universes

Linked works, settings, characters and media manifestations. Worldbuilding, archives and media continuity.

STRUCTURE Works, characters, fictional events and media manifestations form a related universe.

USE CASES worldbuilding · media archive · creative continuity

Pattern: Creative universe cluster

ARK-14 Simulation / Transitions

State-transition definitions and hypothetical scenarios. Simulation, state machines and training situations.

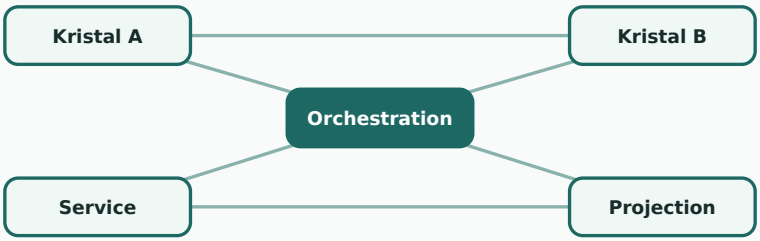

STRUCTURE Initial states progress through actions and transitions toward hypothetical outcomes.

USE CASES simulation · scenario analysis · state machine

Pattern: State transitions

ARK-15 Hybrid Composition

An assemblage of several kinds of independent knowledge structure. Cross-system models and multi-part applications.

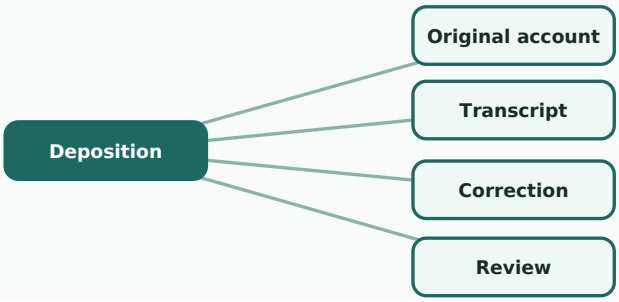

STRUCTURE Different knowledge-state forms interact through explicit references and interface boundaries.

USE CASES composite application · multi-system architecture · integrated knowledge

Pattern: Hybrid network

ARK-16 Testimony / Deposition

Attributed accounts with recordings, transcriptions and revisions. Witness records and declarative evidence dossiers.

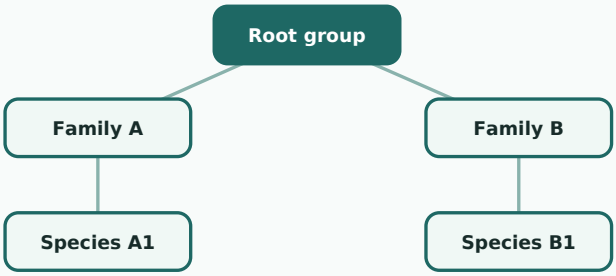

STRUCTURE Attributed accounts, recordings, transcriptions, corrections and independent evaluations remain distinct.

USE CASES witness statement · oral history · deposition record

Pattern: Testimony dossier

ARK-17 Taxonomy / Natural Classification

Classification tree with groups, subclasses and synonyms. Nature maps, biological categories and material typologies.

STRUCTURE Natural categories branch into families and species with criteria, synonyms and cited authorities.

USE CASES wildlife taxonomy · natural classification · specimen catalogue

Pattern: Classification tree

ARK-18 System-State Matrix

Observed condition of multiple systems across dimensions. Infrastructure status, asset state and configuration review.

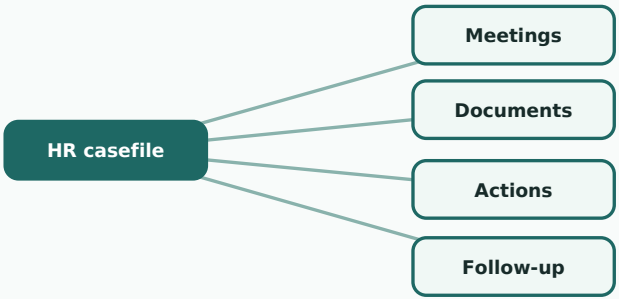

STRUCTURE Systems are measured on comparable dimensions at stated times, distinct from target configuration.

USE CASES infrastructure status · asset inventory · system monitoring

Pattern: System-state matrix

ARK-19 Casefile / Follow-Up

Central record of documents, notes, actions and follow-ups. Employee follow-up, case management and tracked interventions.

STRUCTURE A case centralizes meetings, documents, actions and assessments while keeping provenance and access controls.

USE CASES employee follow-up · HR casefile · case management

Pattern: Case tracking dossier

PRF-01 System Troubleshooting

Track symptoms, test competing hypotheses, and preserve observations while resolving technical incidents.

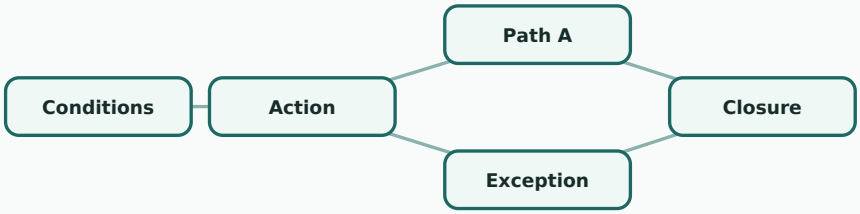

STRUCTURE An incident hub links reported symptoms, diagnostic tests, event logs, and observed system state.

USE CASES technical support · intermittent faults · failure analysis

Assembly: diagnostic-causal, registre-evenementiel, etat-systemes, composition-hybride

PRF-02 Procedural Environment

Document prerequisites, authorized roles, exception handling and conditional process steps.

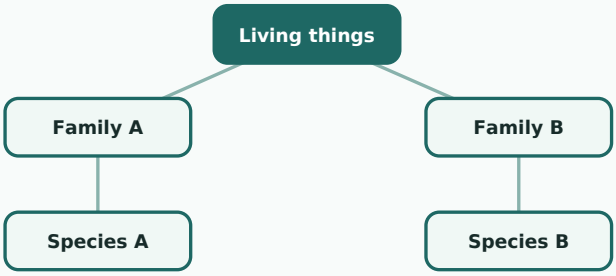

STRUCTURE A process branches at decision points; execution logs and simulations remain separate.

USE CASES medical protocols · police operations · industrial SOPs

Assembly: procedure-protocole, registre-evenementiel, simulation-transition

PRF-03 Nature Taxonomy

Classify living and non-living natural entities with explicit criteria and source references.

STRUCTURE A root category branches into groups, subgroups and specimens, with recorded synonyms.

USE CASES flora and fauna · minerals · natural objects

Assembly: taxonomie-classification, referentiel-semantique

PRF-04 System-State Tracking

Compare the observed condition of several systems across measurable dimensions.

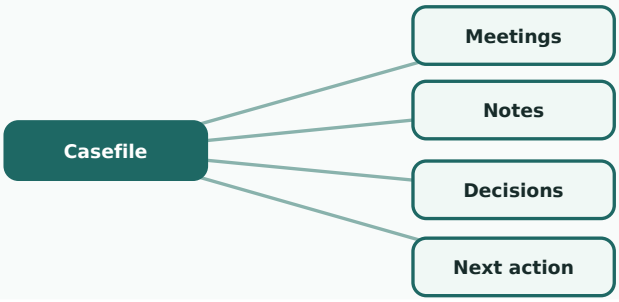

STRUCTURE Rows represent systems; columns represent observed state dimensions; the timeline is external.

USE CASES servers · personal devices · deployment states

Assembly: etat-systemes, registre-evenementiel

PRF-05 Employee Follow-Up

Structure a restricted employee casefile with meeting notes, actions and dated supporting records.

STRUCTURE A casefile links meetings, notes, decisions and separate testimony without collapsing their provenance.

USE CASES employee support · HR follow-up · case management

Assembly: dossier-suivi, registre-evenementiel, deposition-temoignage
